We are working on implementing a simple model for teams and organizations to satisfy our internal requirements. It's a simple design that we hope can be the base of future teams/orgs infrastructure.

Our current design creates the following tables:

organizations

list of organizations

Column	Type
id	int
name	varchar
visibility	ENUM

org_admins

list of users who can make changes to organizations

Column	Type

Assignees

An API needs to:

– be portable
– be lightweight
– use existing osm ids
– anger the least amount of people
